EBB REACH Regulation Policy

Compliance with the European REACH regulation 1907/2006 (Regulation Evaluation Authorisation & Restriction of Chemical Substances) involves several stages of regulatory requirements. This is to ensure the risks from chemicals are managed responsibly and safety information is provided on any substances once product is placed on the market. The regulation also calls for the progressive substitution of the most dangerous chemicals - Substances of Very High Concern (SVHC) – when suitable alternatives have been identified.

As a distributor, EBB Group does not have any obligation of pre-registration or registration under REACH.

We work closely with our suppliers to ensure that they fulfil any obligations that are required. If you require to see this information, please contact your sales representative who will be able to gather this for you.
